Designing maps for interior design of buildings, kitchens, and ready-made residential home maps using multiple programs.

Network Technician - Internet Services Company

Feb 2019 - Jun 2020

Managing internet towers and monitoring devices and subscribers in the internet service.

PROJECTS

Edmark Iraq — ERP & E-Commerce Platform

Laravel 12 · PHP 8.2 · React · MySQL · Sanctum

My largest system: an integrated platform running the operations of Edmark Iraq — the authorized distributor of Edmark Malaysia products — from the public storefront to the internal resource-management system. A React frontend on a Laravel 12 backend with a unified API. Storefront (public): • Product catalog with pricing and membership points per product • Bag store: ready starter packages, plus a composer letting customers build their own bag at customer pricing above a minimum • International stores: a storefront per country in its local currency (Jordan in JOD, Syria and Lebanon in USD) • Company page: history, products, marketing plan, branches, and certifications • Cart and orders, light and dark modes, and an RTL Arabic interface ERP (internal): • Point of sale, sales and purchase invoices, and returns • Warehouse management: stock levels, movements, adjustments, and multiple warehouses • Treasury and cash box: accounts, transactions, cash handovers, and external debts • Points and wallet: points ledger, member-to-member transfers, top-up cycles, and withdrawal requests • Member tree and commissions: commission imports, tree matching, and duplicate record merging • Delivery: delivery batches, waybills, and order assignment to couriers • Sales targets, reports, and account review • Internal communication: posts and comments, support messages with departments and attachments, and announcements • Learning module: illustrated step-by-step lessons training members on the system • Push notifications via Firebase (FCM) • Excel import and export, plus PDF and barcode generation Scale and architecture: • A broad system of dozens of interconnected modules in one platform • Granular permissions: per-user permissions grouped by module • Authentication via Laravel Sanctum • In active daily production use

Tafada — Arabic Letters Learning Game for Kids

تطبيق أندرويد · Google Play

An educational racing game published on Google Play that teaches children aged four and up Arabic letters and words through play. Completely free, works offline, and collects no data about the child. Educational design: • Children collect Arabic letters in order to spell a complete word • 50+ curated Arabic words, with a progress board tracking learned words • Clear classical Arabic voice pronouncing every letter and word • The correct letter repeats until the child catches it — a no-frustration design • Voice encouragement on completing each word Gameplay: • One-touch controls, suitable for young children • Three difficulty levels with gradual progression • A garage of 8 cars unlocked with coins earned through play • Per-car upgrade system: weapon, shield, health, escorts, and car power • Daily missions giving a fresh goal each day • Time-of-day stages: morning, sunset, and night • Engine, letter, and word audio with haptics, both toggleable in settings Parent-friendly: • Collects no personal data, and requires no login or account • No in-app purchases — everything unlocks through play • Family-friendly ads only (G rating) • Works fully offline

Career — Recruitment & Professional Training Platform

PHP · JavaScript · html2canvas · jsPDF

A platform for a recruitment and professional training organization connecting Iraqi talent with suitable job opportunities, collecting applications through a comprehensive digital form that converts into an archive-ready PDF. • Six-section, 25-field application form: personal information, education, work experience, skills, job details, and additional information • In-browser PDF generation from the form via html2canvas and jsPDF — with no server-side processing • Skill selection from a defined list: computer use, communication, teamwork, customer service, Microsoft Office, English, management, sales, marketing • Preferred work type selection: full-time, part-time, temporary, or flexible • Expected salary, availability date, and preferred work location fields • Form opens as a modal overlay without a page reload • Three showcased services: recruitment, training and development, and career guidance • Organization statistics display: 12+ years of experience, 8K+ beneficiaries, 320+ annual job opportunities • Calm corporate design with a unified visual identity and an RTL Arabic interface • Fully responsive across phone and tablet screens

Gaming Center Management System — Next Level & Revive

PHP · MySQL · JavaScript · PWA

A complete management system for gaming and entertainment centers, combining bookings and human resources in a single dashboard, built once and deployed to two independent centers in Ramadi: Next Level and Revive. Each center has its own database, sections, devices, pricing, staff, and admin dashboard — the same system, with fully separate data. Both deployments: • Next Level — center.edmarkoffice.com • Revive — revive.edmarkoffice.com Sections differ per center based on what each one offers: • Next Level: standard and VIP billiards, Master and Elite PCs, cinema halls, PlayStation, and two floors of tables • Revive: racing simulators (Dirkson), private VIP ROOMS, VIP PlayStation, Master and Elite PCs, and pool System features: • Full admin dashboard: booking tracking and filtering by status (confirmed, completed, rejected, no-show) • Section and device management: add, edit, and price independently per center, and flag any device for maintenance • Staff and permissions management, sales reports, and backups • Multi-device selection within a single booking • Live billing calculator that updates instantly with duration and device count • Booking date, arrival time, and duration in hours and minutes • Loyalty points system where customers track their balance and past bookings • Direct WhatsApp booking confirmation • CSRF token form protection • Installable as a mobile app (PWA) • RTL Arabic interface with a dark neon design and a distinct color identity per center HR module — integrated into the same dashboard as the booking system: • HR dashboard showing active staff, today's present and absent, pending leave requests, and monthly lateness • Clock-in and clock-out verified by photo and geographic location • GPS geofence verification: staff can only clock in within a configurable radius of the center • Additional verification against the center's WiFi network name (SSID) • Morning and evening shifts with independent hours, and the evening shift toggleable • Lateness tolerance in

minutes, with an optional per-minute salary deduction • Leave management: request, approve, reject, with status tracking • Annual and sick leave balances per employee, plus an hourly leave balance • Payroll calculation, with per-employee files and documents • Internal staff announcements system

Al-Ghurra Resort — Investment Platform

PHP · MySQL · JavaScript · Google Maps API

A complete investment platform for a tourism resort project, letting investors track their stake and follow construction progress in real time. • Live share dashboard showing unit price and remaining shares • Dedicated investor login portal • Documentation gallery with 200+ photos and videos across build phases • Phase-based filtering with paginated browsing for performance • Interactive project location map via Google Maps • Direct WhatsApp contact integration • Fully responsive, RTL-first Arabic interface
